Art Unit: 3677

In response to the first office action, applicant correctly noted that the examiner overlooked claims 12. Since claim 12 is drawn to a method, the claims require a restriction/election.

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-7, 11 and 13-16, drawn to a bolt assembly, classified in class 411, subclass 107.
- II. Claim 12, drawn to a method of retaining a bolt, classified in class 29.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case the product could be made without having to be rotatably driven through the bore.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
